Review the solution

5 minutes

The following code is one possible solution for the challenge from the previous unit.

C#

```
string projectName = "ACME";  
string englishLocation = @"c:\Exercise\{projectName}\data.txt";  
Console.WriteLine($"View English output:\n\t\t{englishLocation}\n");  
  
string russianMessage = "\u041f\u043e\u0441\u043b\u043e\u0442\u044d \u0440\u0443\u0441\u0441\u043a\u0438\u0439  
\u0440\u0443\u0431\u0440\u044b \u0447\u0438\u0442\u0430\u044e\u0442 \u0432\u0430\u0448\u0435 \u0444\u0430\u0439\u043b";  
string russianLocation = @"c:\Exercise\{projectName}\ru-RU\data.txt";  
Console.WriteLine($"{russianMessage}:\n\t\t{russianLocation}\n");
```

This code represents "*one possible solution*". You might have some variation in naming variables or in the character escape sequences you used. You might have used `Console.Write` instead of `Console.WriteLine`. You might have attempted to combine everything without using several variables.

However, as long as your code follows the instructions from the challenge and produces the desired output, then congratulations! Continue to the knowledge check in the next unit.

Important

If you had trouble completing this challenge, maybe you should review the previous units before you continue on.
