# Write your first C# code

27 min • Module7 Units

Beginner

Developer

.NET

Get started by writing code examples to learn the basics of the C# syntax!

## Learning objectives

After you complete this module, you'll be able to:

- Write your first lines of C# code
- Use two different techniques to print a message to a text console
- Diagnose errors when you type code incorrectly
- Identify different C# syntax elements like operators, classes, and methods
